PHARMACOVIGILANCE SYSTEM MASTER FILE (PSMF)
MAIN BODY SUMMARY

1. PURPOSE

This document provides an audit-ready summary of the Pharmacovigilance System Master File (PSMF) based on the supplied organisational checklist, system inventory and SOP register.

2. ORGANISATIONAL STRUCTURE AND QPPV OVERSIGHT

The pharmacovigilance function is governed through collaboration between the Qualified Person for Pharmacovigilance (QPPV), Safety Operations, Quality Assurance and Information Technology functions.

QPPV Responsibilities:
- Oversight of pharmacovigilance compliance.
- Case intake and medical review governance.
- Aggregate reporting oversight.
- Vendor oversight and compliance monitoring.
- Audit, CAPA and inspection readiness activities.
- Business continuity oversight.
- Escalation and management review of safety issues.

Supporting Functional Areas:
- Safety Operations: signal management, literature monitoring and case processing.
- Quality Assurance: quality system administration, audits and CAPA management.
- Information Technology: validated system support, access management and backup controls.

3. SOURCES OF SAFETY DATA

Safety information may originate from spontaneous reports, literature monitoring, regulatory authorities, partners, vendors, clinical programmes and post-marketing surveillance activities.

4. COMPUTERISED SYSTEMS AND GLOBAL SAFETY DATABASE ARCHITECTURE

System Inventory:
PV-SYS-01: Safety Database | Owner: IT | Status: Validated | Backup: Weekly
PV-SYS-02: Document Management | Owner: Quality | Status: Remediation Open | Backup: Weekly
PV-SYS-03: Training Records | Owner: IT | Status: Remediation Open | Backup: Weekly
PV-SYS-04: Signal Analytics | Owner: Quality | Status: Remediation Open | Backup: Weekly

Database Architecture:
The validated safety database serves as the system of record for adverse event processing. Supporting applications include document management, training management and signal analytics platforms. Weekly backup controls have been established across all identified systems.

5. SIGNAL MANAGEMENT PROCESS

1. Data Collection
2. Signal Detection
3. Signal Validation
4. Prioritisation
5. Medical Assessment
6. Benefit-Risk Evaluation
7. Governance Review
8. Risk Communication
9. CAPA and Monitoring

6. QUALITY MANAGEMENT SYSTEM

SOP Inventory:
PV-SOP-001 Case Intake v4.2
PV-SOP-002 Medical Review v4.3
PV-SOP-003 Signal Management v3.3
PV-SOP-004 Aggregate Reports v4.5
PV-SOP-005 Vendor Oversight v2.2
PV-SOP-006 Business Continuity v3.0
PV-SOP-007 Audit and CAPA v3.5
PV-SOP-008 Literature Monitoring v1.1

Training Compliance:
Training completion metrics range from 87% to 98% across current SOPs.

7. AUDIT HISTORY AND INSPECTION READINESS

Current observations indicate remediation activities remain open for Document Management, Training Records and Signal Analytics systems. CAPA management activities are governed through the Audit and CAPA process. Inspection readiness is maintained through periodic review of system status, SOP effectiveness, training compliance and business continuity controls.

8. PERFORMANCE INDICATORS

Recommended KPIs include case processing compliance, training completion rates, CAPA closure effectiveness, signal review timeliness and audit observation closure rates.

9. ANNEX INDEX

Annex 1 – Organisational Structure
Annex 2 – QPPV Responsibilities
Annex 3 – Sources of Safety Data
Annex 4 – Computerised Systems Inventory
Annex 5 – PV Processes
Annex 6 – Performance Indicators
Annex 7 – Quality System Documentation
Annex 8 – Audit and CAPA Records
